

Spring and Fall Harvesting Plan (Areas of Emphasis – All Eurasian milfoil colonies may be cut in spring and fall.

These harvest maps will be followed by the harvesting crew. Areas in the lake 5' deep or greater will be harvested to a depth to 1' from the lake bottom. Areas shallower than 5' deep can have a harvested path of 50' wide with a harvest depth of 1' from the lake bottom. All mechanical harvesting will get no closer to the shoreline than the dock edges. Only hand harvesting may be done in the areas between the shoreline and ends of boat docks. Hand-harvesting may be done no more than 30' wide corridor (which must include boat dock) along shoreline.
